

**January 2017 Cohort**  
**Career Homework 1**  
**Homework due on 3/18/17 by 5pm**

1. Based on the learning today, post 2 job specs in Los Angeles. For example, roles could be front end web developer, javascript developer, etc. Search for particular programming languages we teach to get better results.

2. Here are a couple of sites to search: <http://www.indeed.com/>, <https://angel.co/jobs>, <http://www.builtinla.com/>, <http://www.dice.com/>, <https://www.crunchbase.com/#/home/index>

3. Familiarize yourself with [www.onetonline.org](http://www.onetonline.org) -- the national database of careers. Conduct occupational searches (top right corner of homepage) plugging in at least 2 job titles to get information about every aspect of that job type.

4. Start making LinkedIn connections, 10+ per week (can be anyone you know, to build your network and LinkedIn search function).
